

Renishaw PI 7-3 Probe Interface

Category: Renishaw Racks And Accessories

PI 7-3

The PI 7-3 interface is a dual purpose interface designed to process signals from the TP7M strain gauge probe and standard touch-trigger probes.

Special auto-selecting electronics within the interface allow exchange of these probes without any changes to the interface.

It supports TP7M and TP2, TP6, TP6A and TP20 probes.

TP7M

Strain-gauge probe with autojoint mounting

TP2

Small, light, versatile probe

TP6(A)

Robust kinematic probes with M8 and autojoint mounting options

TP20

Compact kinematic probe with module changing
